

Powerful business advantage through
greater insight and control

Building Management Systems

innovative energy solutions
 **optimeyes**

Improves operational efficiency

Gain real-time visibility and understanding of your power usage Data analysis to identify inefficiencies and wastage

Unlock Value

to identify opportunities to reduce your energy enabling you to redirect budget

Reduces business risk

Predictive maintenance alerts to extend the life of your equipment

Unlock greater business efficiency

Today's businesses are under increasing pressure – greater competition, increasing costs and tighter regulations all impact profit. Under such threats it's hard to ignore the importance operational efficiency and cost-reduction in your business. Turning energy from an uncontrolled commodity cost to a value-adding resource could be just what you

need to gain a competitive advantage. A Building Management System will enable you to see exactly how your business uses energy right down to individual equipment or device level – giving you the energy intelligence you need to reduce wasted power and improve your operational efficiency.

What is a Building Management System?

BMS systems are a critical component to managing energy demand. They give you complete visibility and control over how and when you use your energy. A BMS is a critical component in an efficient, integrated energy solution, however, improperly configured building management systems are believed to account for 20% of building energy usage. The intelligence driven by data from a BMS helps you optimise performance, deal with potential equipment failures before they happen, and reduce energy inefficiencies and waste.

The benefits to your business

Improved operational efficiency

Real-time visibility of power usage delivers energy intelligence to help you identify and address inefficiencies in your current operation and enables early, pro-active action.

Unlock value

Analyse your energy consumption data to identify inefficiencies and wastage, reducing energy bills and enabling you to put your budget towards increasing your production.

Reduce business risk

Avoid costly downtime and extend the life of your equipment with real-time insights and predictive maintenance alerts.

Inadequate or incorrect application of a boiler control can easily add

15-30%

to fuel consumption compared to a fully optimised system.

Is a BMS right for your business?

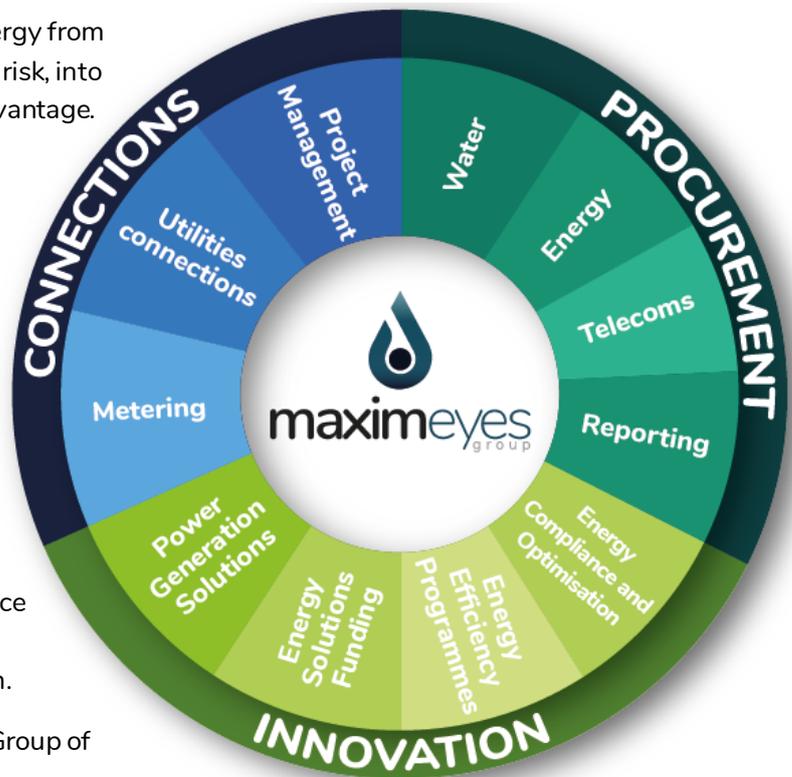

BMS can be used in a variety of business environments from large scale applications in offices and factories to smaller hotels and care homes. They are ideal for any business looking to gain insights into energy consumption with minimum disruption and maximum cost-effectiveness. If you would like to understand how a BMS could benefit your business, our free consultation and analysis will demonstrate to potential savings you could achieve.

Why Optimeyes?

We work with you to help you turn energy from a spiralling cost and potential business risk, into a source of sustainable competitive advantage. Combining our extensive experience in energy solutions with our funding options and tailored system designs, our experienced team can provide the right energy solution for any business.

Our fully funded model also means you can have a solution that has an immediate positive impact on your company's finances. We are at the forefront of changing how businesses use energy, so you have the reassurance of our extensive industry experience, knowledge and a world-class operation.

Optimeyes are part of the Maximeyes Group of companies providing businesses with a complete solution for all their energy requirements.
